THIS IS UNEVALUATED INFORMATION	

1. A loose surfaced, all-weather, graded road (No 903 on legend) ran from Stryj (City) southwest to Lwowska via Zarnow and Boleschow. (No 903 on legend) ran from Stryj west-northwest to Drogobych (Drogobych) and also from Stryj southwest to Boleschow. There were also a number of loose surfaced, all-weather roads (No 903 on legend) which ran from Stryj northeast to Drogobych (Drogobych), also eastward to Zarnow and southeast to Turza Wlk and Kalush.
2. The roads were over eight meters wide. The roads were designed and constructed for heavy usage. During World War II both Soviet and German tanks up to 30 tons in addition to various other military vehicles traveled on these all-weather roads. The roads were periodically inspected and maintained by assigned workmen. The roads were called the Czar's highway (tsarskaya dorogi).
3. The roads were crowned for easy drainage and shallow drainage ditches along both sides of the roads. The subbase of the roads around Boleschow, Skole, and Rozhureze was of natural stone, rock, and sandy loam. The base of the roads in this section was of crushed rock and the top layer consisted of crushed rock surfaced with sand. North, northwest and northeast of Stryj the subbase of the roads was black dirt. The road base was also of crushed rock and the top layer was of crushed rock surfaced with sand. The terrain north of Stryj was flat except around Mikolajow where it was hilly. Between Rozhureze and Mikolajow there were a few curves which made all the vehicles slow down in order to make the turn without any accidents. The terrain south of Stryj is hilly and rocky. The Carpathian mountains began at Synovodsko Wyz which is located approximately 15 kilometers southwest of Stryj.
4. Between the villages of Niesuchow and Rajtow which are on the road that goes from Stryj to Drogobych there were two wooden bridges over the Ulezanka stream.
